Introducing Version 20!

School Ledger with School Accounts Payable

Version 20 of *School Ledger with Accounts Payable* will start shipping soon. Version 20 introduces many operational enhancements, including functions requested by our users over the past year.

The primary emphasis in V20 is “infrastructure” upgrades – features that enhance the baseline operability of the system and make for a smooth workflow. Upgrades were made to several operational features, as requested by bookkeepers.

New Features in Version 20

- **New! Program startup bootstrapper** monitors program dependencies and startup conditions and automatically resolves most common issues related to program updates or installation.
- **New!** A new **Connection Manager** monitors the database on the network or local machine for interruptions and automatically re-establishes the connection and restores program operation.
- **Improved!** Program shutdown can take several moments to back up files and close connections. A new **shutdown progress indicator** keeps the user informed of this process and any resulting messages that arise.
- **Improved!** The **Backup Log** system has improved sorting and pruning to ensure a faster and more accurate overview of automatic and scheduled database backups.
- **Improved!** The **Reconciliation system** now monitors and correctly prevents manually updating a transaction’s Cleared or Reconciled status while the reconciliation screen is open.
- **New!** A new **diagnostic tool** can perform a thorough scan and analysis of the School Ledger installation to ensure that all systems are operating correctly.
- **New! Program tracing, logging and exception handling** has been completely overhauled, helping to improve feedback, performance and stability.
- **Improved! Renaming a database file** works in a wider range of circumstances.
- **Improved! Editing a transfer transaction** now shows account information
- **Improved!** The **program installation and updating system** has been reworked and refined and works better across a wider array of systems.
- **New!** A new preference setting allows adjusting the **font size** of the main program menu and all other screen menus.
- **Improved!** The **Program Registration Manager** now launches with elevated privileges to handle program licensing and registration more smoothly.
- **Improved! Type-ahead input on data entry screens** has been further improved and refined to work more intuitively.
- **Improved! Searching the purchase order register** now searches more data elements and provides more accurate feedback.
- **Improved!** The **Billing Invoice screen** is now larger, easier to use, and can be resized.
- **Improved! Printing** from the Ledger, Checkbook, Purchase Orders, and Receipts registers has greatly improved column layout and formatting.
- **New!** A new preference setting allows **each invoice line** item to require a GL account be specified.
- **New!** The Bank Accounts screen now displays the **date of last reconciliation** for each bank account.
- **Improved!** The **Fiscal Year Manager** has smarter transaction analysis when modifying dates.
- **Improved! Attempted deletion of accounts** scans a broader array of edge-cases to ensure maximum account integrity.
